

ABSTRACT

Liposomes containing as a membrane component an active ingredient of a medicament for prophylactic and/or therapeutic treatment of a vascular disease caused by abnormal proliferation of vascular smooth muscle cells (e.g., an active ingredient containing a benzimidazole derivative having suppression action on foaming of macrophages , and medicaments for prophylactic and/or therapeutic treatment of a vascular disease caused by abnormal proliferation of vascular smooth muscle cells, which comprises the liposomes. There is provided means for selectively accumulating a medicament for prophylactic and/or therapeutic treatment of disease caused by abnormal proliferation of vascular smooth muscle cells such as arteriosclerosis and restenosis after PTCA in a site the vascular disease.
